

Application No. 09/579,294
Second Response

engaging projections^{17P} provided on a carbon¹⁷ which was previously burnt
at a high temperature, said engaging projections^{17P} being engaged with engaging holes^{15H} provided
in said segments¹⁵ and integrally formed as one unit,

wherein tip ends of cut-rising pieces²¹ functioning to allow insertion of
said engaging projections^{17P} into said engaging holes^{15H}, but operative to prevent said engaging
projections^{17P} from being pulled out from said engaging holes^{15H}, are projected from peripheral
edges of said engaging holes^{15H}, and

said cut-rising pieces²¹ are brought into contact under pressure with
peripheral faces of said engaging projections^{17P}.
